Subject: Introduction to Python Programming

Subject Code: 22PLC15B/25

Second module Question Bank

1. Explain the difference between a list and a dictionary
2. Discuss the list handling Functions in python with example
3. What are lists? Lists are mutable. Justify the statement with examples.
4. How tuples are created in python? Explain the different ways of accessing and creating them.
5. Explain dictionaries. Demonstrate with a python program.
6. Compare and contrast lists and tuples
7. Demonstrate 1) how a dictionary items can be represented as a list of tuples 2) How tuples can be used as keys in dictionaries
8. What is list? Explain the concept of slicing and indexing with proper examples
9. What are the different methods supports in python list. Illustrate the methods with an example.
10. What is dictionary? Illustrate with an example python program the usage of nested dictionary.
11. Describe any two operations and list methods.
12. List merits of dictionary over list.
13. Explain the following operations in tuples i) sum of two tuples ii) slicing operators iii) compression of two tuples iv) Assignments to variables.
14. Explain append (), insert () and remove () methods with example in list.
15. How tuple is different from list. Which function is used to convert list to tuple
16. Create a function to print out a blank tic-tac-toe board
17. Discuss get (), item (), keys () and values () dictionary methods in python with examples
18. What are the ways of traversing list? Explain with a n example for each
19. Differentiate between pop and remove methods on lists. How to delete more than one element from a list
20. Explain i) list concatenation and replication ii) in and not in operators iii) passing references iv) copy() and deepcopy()

Programs

21. Develop a program to accept a sentence from the user and display the longest word of that sentence along with its length.
22. Write a python program to access 'n' number from the user. Find sum of all even numbers and product of all odd numbers in entered list.
23. Write a python program to accept USN and marks obtained, find maximum, minimum and students USN who have scored in the range 100-85, 85-75, and 75-60 and below 60 marks separately.
24. Implement a python program using lists to store and display the average of N integers accepted from the user.
25. Write a python program to count the number of occurrences of a given word in a file
26. Implement a python program using lists to store and display the average number of N integers accepted from the user.
